

AIML Syllabus

Semester Subjects

The AIML curriculum includes subjects such as Data Structures, Design and Analysis of Algorithms, Probability and Statistics, Database Management Systems, Machine Learning, Deep Learning, Natural Language Processing, Computer Vision, and MLOps.

Laboratory Courses

Students are expected to complete Python Programming Lab, Machine Learning Lab, DBMS Lab, and Mini Project /

Major Project work as per the semester plan.

Evaluation Pattern

Each theory subject includes internal assessments, assignments, and an end-semester examination. Lab courses are evaluated based on record work, practical performance, viva voce, and project demonstrations.

Learning Outcomes

By the end of the program, students should be able to build machine learning models, preprocess data, evaluate models, understand neural networks, and deploy AI solutions responsibly.
